

Thank you for being here

& helping us to stream, record and publish (nearly) all

You will:

- **produce** the live stream and recordings
- operate the **cameras and video mixer**
- and **take care** of our equipment (also during do-not-record talks)

... of course with our support

About this meeting

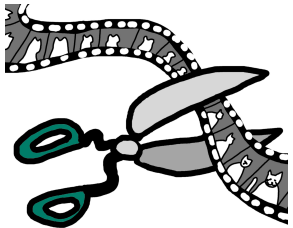

1. How to be camera / mixer angel & **what's new?** (~ 20 min.)
2. How to get a **shift**
3. **Approval** in angel system

Who is who?

Camera Angel

- one per camera
- operates the cameras
- maintains good camera settings

Mixer Angel

- one per lecture hall
- composes images from multiple sources
- mix for live stream and recordings

Audio Mixer

- = video mixing angel
- (un)mute microphones
- adjust amplification for individual microphones
- check audio level (loudness) for stream

VOC Crew – Office

- support in the lecture halls
- responsible for keeping stuff working
- familiar with all equipment in use
- able to fix (nearly) all the issues

General: How to deliver a good video?

Theory

- capture what happens on stage
- make it effortless to follow content
- convey mood in the room

You are the “eye” of the audience in live stream and recording.

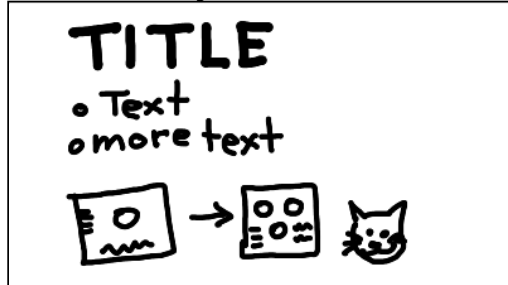

More practical: Mixer angel

select the most appropriate images

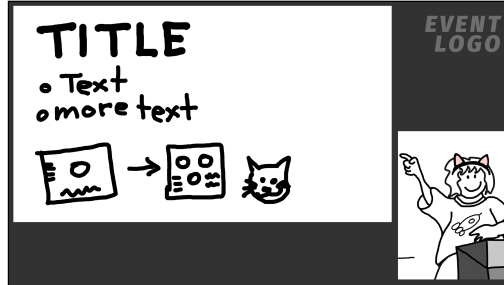

four view options

“slides only”

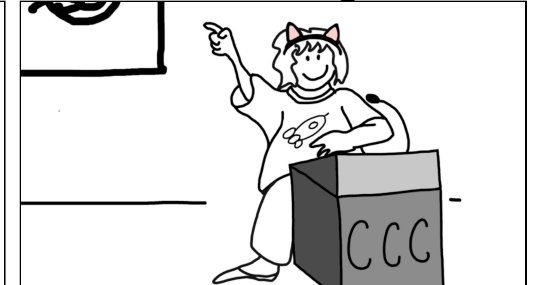

“lecture mode”

“speaker close up”

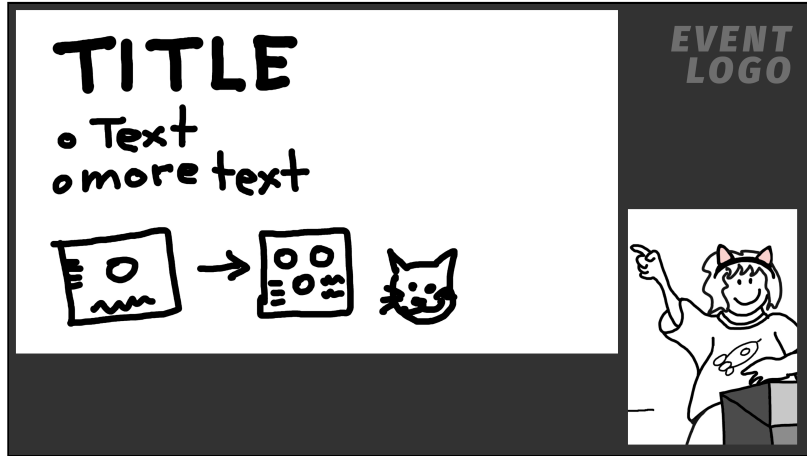

“head to toe / stage”

Mixer Angel: How to choose a view

Lecture mode

✓ When to use:

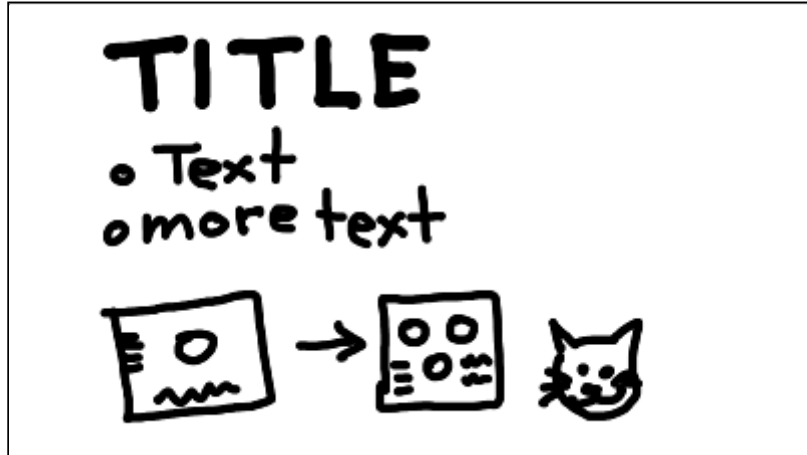

- best option to combine content and speaker
- slides are important: allows to show new slides immediately (but also the speaker)
- when speaker has many slides or something happens on slides

✗ When not to use:

- difficult for more than one speaker

Mixer Angel: How to choose a view

Slides mode

✓ When to use:

- slides are important (also possible in lecture mode)
 - show new slides **immediately**
 - show slides long enough (= readable twice)
- **small screens** need slides in full screen
- if you need to **cut away**
 - audience is not to be filmed → right option if faces appear
 - your rescue if something is wrong with the cameras

✗ When not to use:

- something more interesting happens on the stage
- the speaker tells a story that is only superficial on the slide
- keep in mind: there is a slides only version of the full video!

Mixer Angel: How to choose a view

Speaker close up

✓ When to use

- focus on the speaker and their story
- show gestures and facial expression
- when objects are shown
- leave the width of one hand above the head
- eyes should be close to the upper third line

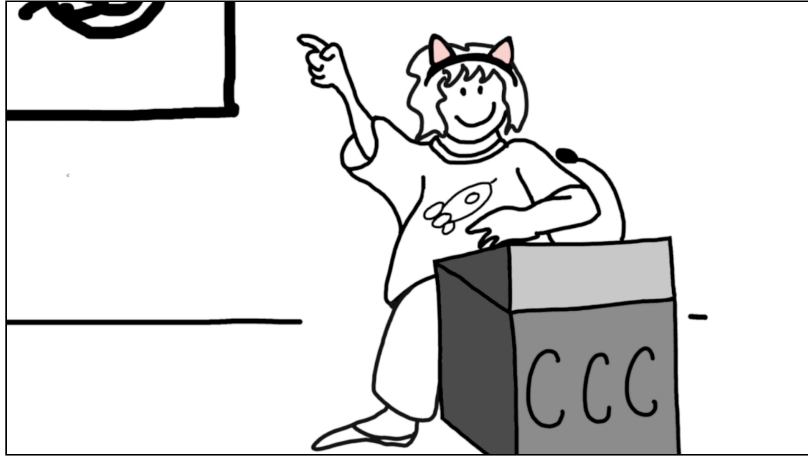

✗ When not to use

- Speaker points to slides → use lecture mode to show speaker & slides

Mixer Angel: How to choose a view

Speaker head to toe / stage

✓ When to use

- Shows the complete stage and the people on it
- Heads of the crowd are OK, if it's dark enough
- Speaker is running around: Locked off, do not move camera.

✗ When not to use

- Don't use this view to show the slides – use lecture mode!

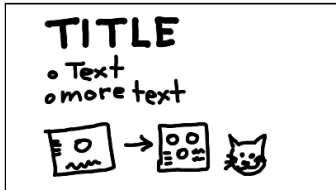

Example talk – one camera, one mixer

1. Set the atmosphere: Show speaker and moderator.

2. Zoom: show speaker in medium close up

3. Slides: Time to figure out: how will the speaker behave?

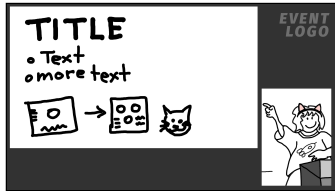

4. Lecture mode: show face & gestures, more inviting to follow the talk

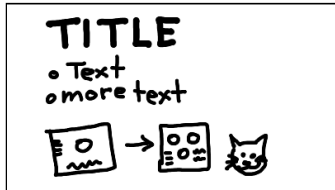

5. Camera: Speaker in close up, because she is telling an interesting story

1. Camera: Show the speaker.

2. Lecture mode: Continue showing speaker, but also the slides.

3. Slides: show the slides in full screen because they are detailed and small

4. Camera: speaker tells side story, show speaker and gestures

5. Lecture mode – Show slides and speaker

In general: Don't be too cutty – Pace your videos temperately. Do not cut too often.

Focus on speaker!

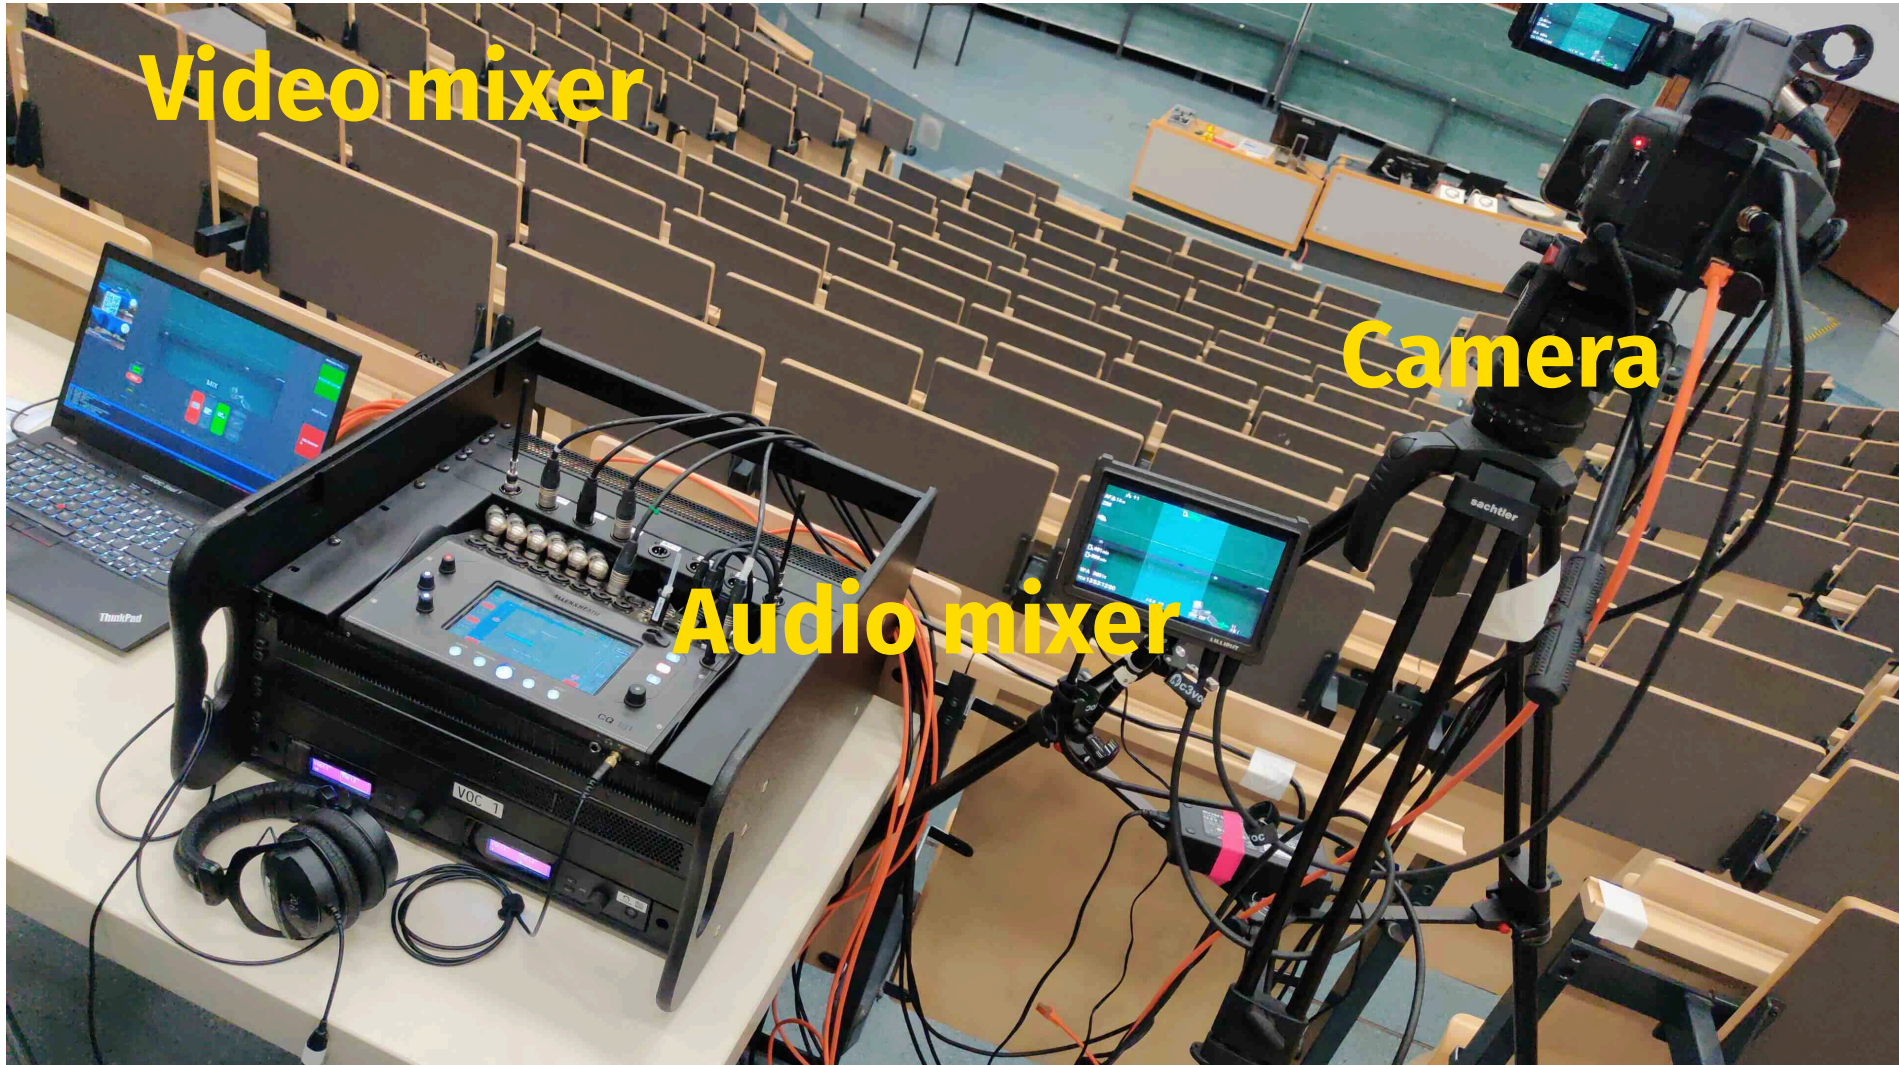

There is **one camera**.

There might be **more people with microphones**: the speaker, the herald...

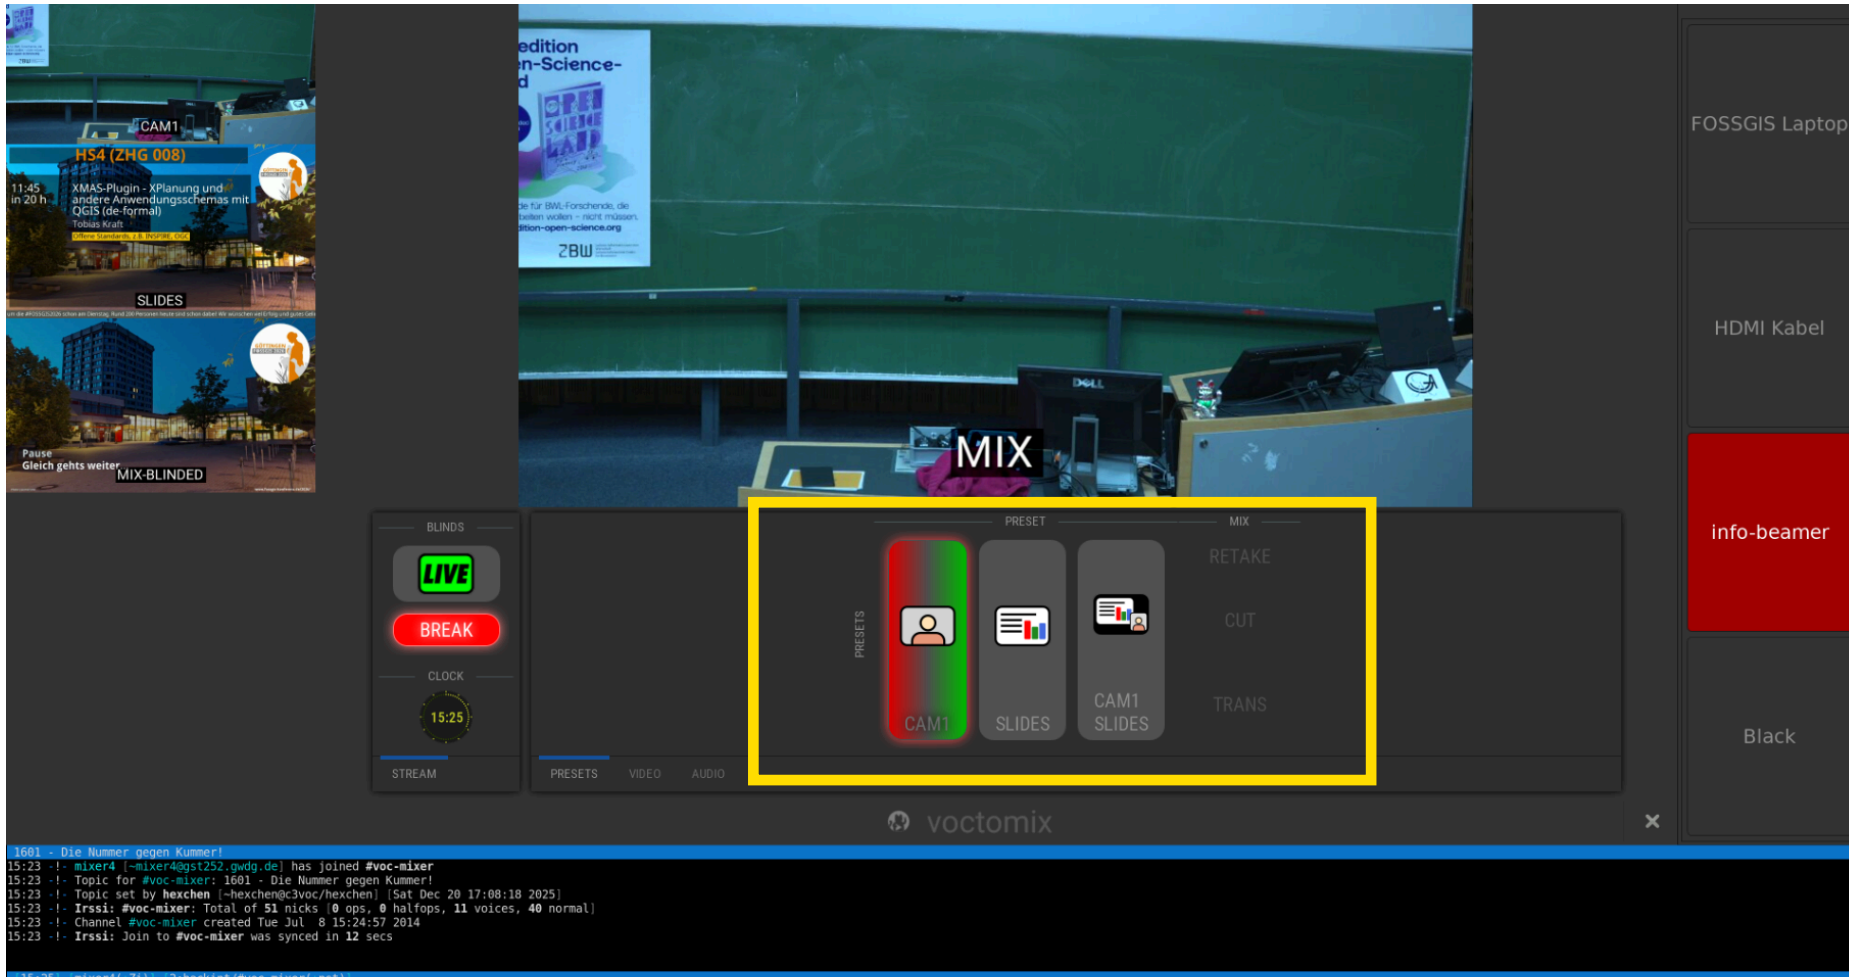

This mismatch can be tricky: You have to **decide** to avoid panic panning.

Please decide in favor of the speaker and **focus on the speaker**.

This could be your setup

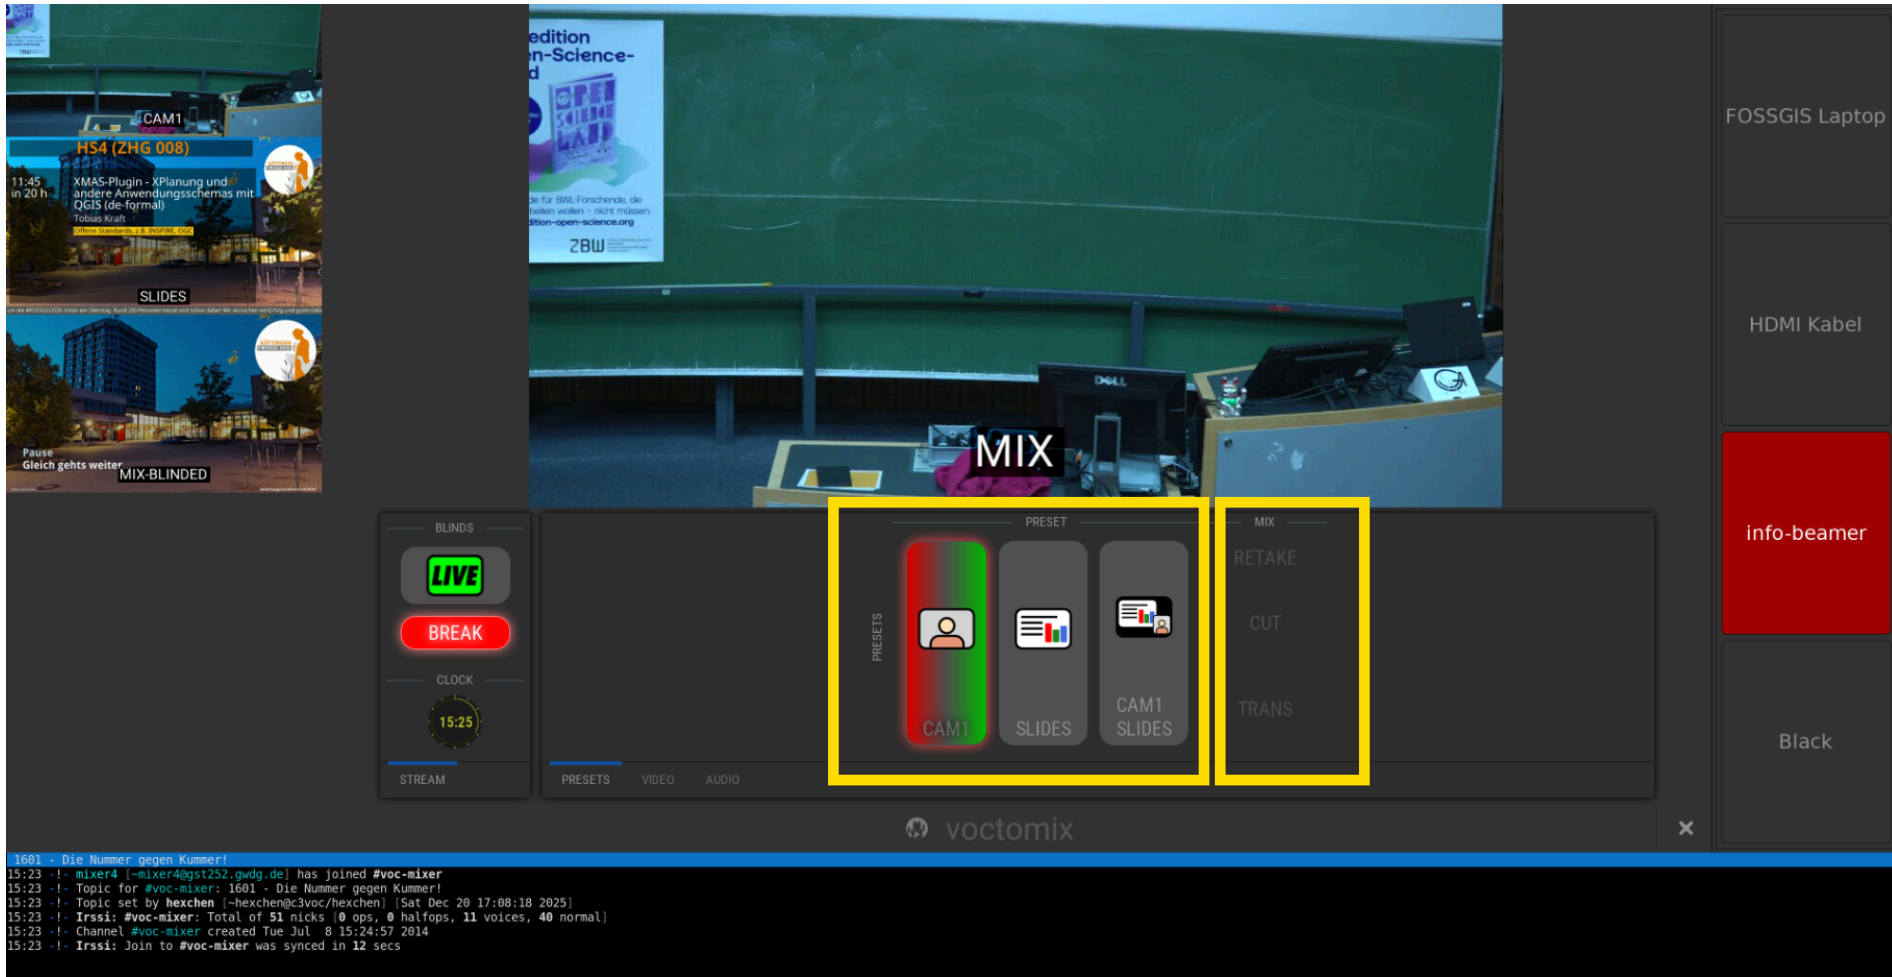

Vocomix: Use “PRESETS” tab to select views

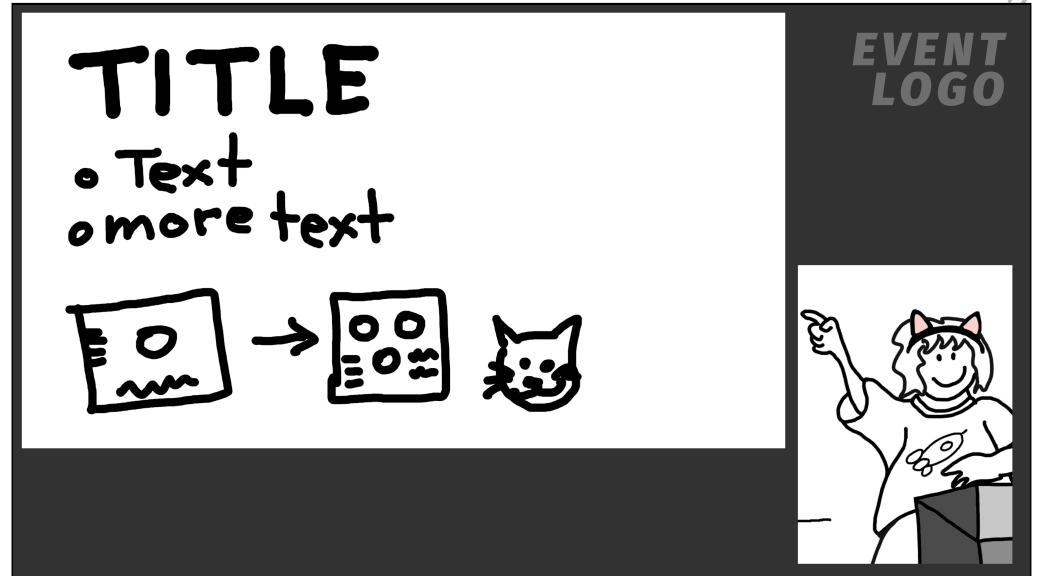

- predefined combinations of cameras and slides (no mixing up, use “presets” tab, not “video”!)
- shortcuts are shown on hover; they do only work when this window is selected!

Vocomix: Use “PRESETS” tab to select views

Step 1: select view [red = current, green = next] **Step 2:** change view [trans = soft, cut = hard]

The camera image is the same – but used for two views

→ So how does the camera know, which image is needed?

The mixer needs to tell the camera which view should be the next one.

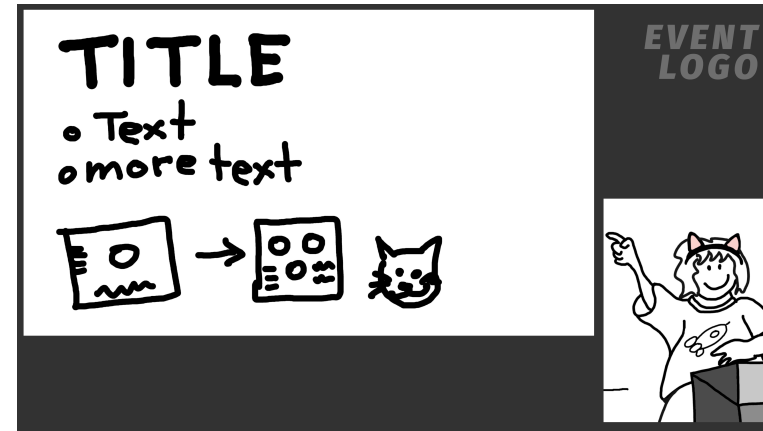

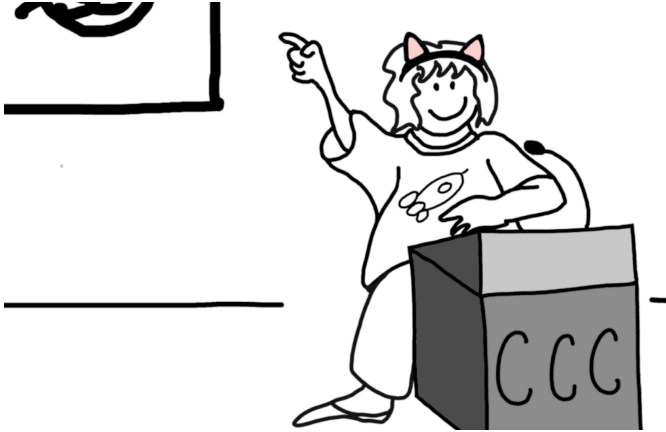

Then cut to the slides. The camera now can adjust the image and tells the mixer when ready.

The mixer cuts back to the camera.

Communication is key!

Example:

Mixer: *[cuts to slides mode]*

I would like to go to lecture mode.

Can you please zoom in and center the speaker?

Camera: *[zooms & centers speaker]* Ready.

Mixer: Great. Camera is live again. In slides mode.

REPEAT AND ADJUST...

Language cheatsheet

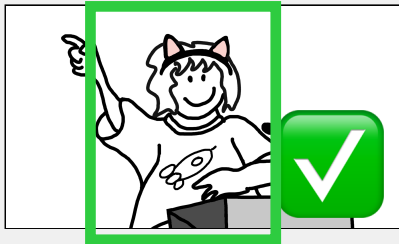

“Please prepare camera X.” – “Please adjust the image in \$shot.” – “Camera X is live / on.”

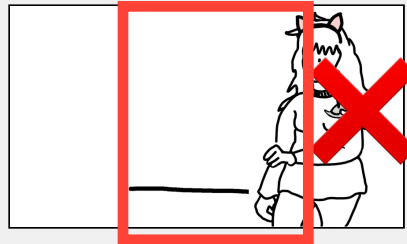

Four main camera shots – the mixer asks the camera for a shot

→ “Please zoom out.” (“Bitte Zoom aufziehen. Rauszoomen.”)

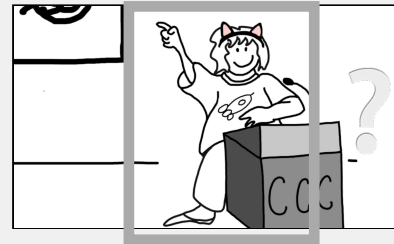

lecture mode approved

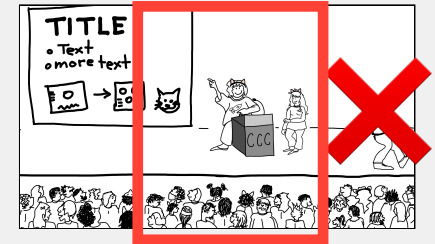

speaker behind lectern
→ **(speaker) close-up**
 (“Halbnah”)

speaker on stage
→ **(speaker) medium / American**
 (“Halbtotale”)

speaker on stage
→ **(speaker) head to toe** (“Ganzkörper”)

stage
→ **long shot**
 (“Totale”)

← “Please zoom in.” (“Bitte Zoom ranziehen. Ranzoomen.”)

Get to know each other:

What makes you feel (un)comfortable? How experienced is the camera angel? Are pans okay?

What if...

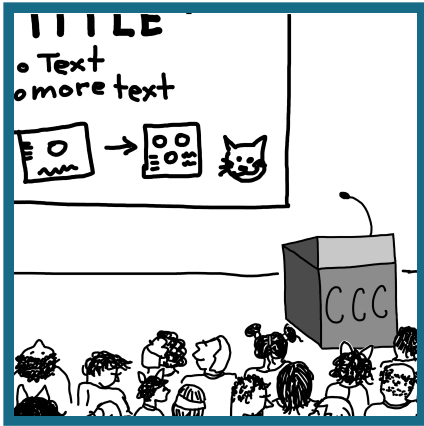

something unexpected happens?

- **mixer laptop has a problem (“voctogui” crashes...)** → this is just the user interface! the streaming and recording continues in the background. Try to contact us, we can restart everything remotely or or tell you what to do.
- think about an emergency strategy
 - **something is obvious wrong on the slides / screen** (e.g. personal information on screen is shown)
 - show speaker
 - **something is obvious wrong with the speaker / camera** (medical emergencies, broken camera...)
 - show slides
- **everything else / not sure: just continue operating**
- if too much and you don't want to decide: show full stage

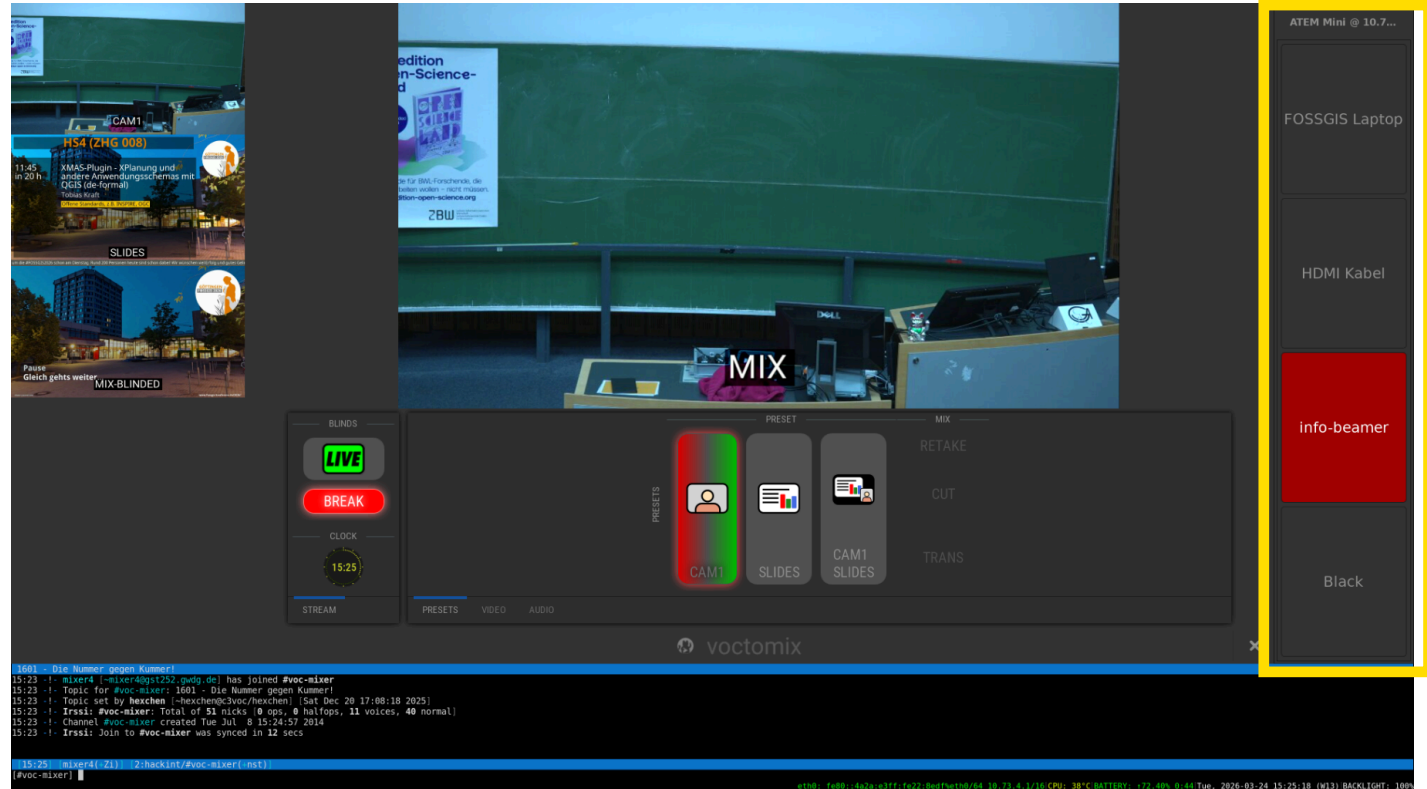

In general: just go on.

Mixing angel – more important than you might think

1. in the lecture hall:

select the beamer
image

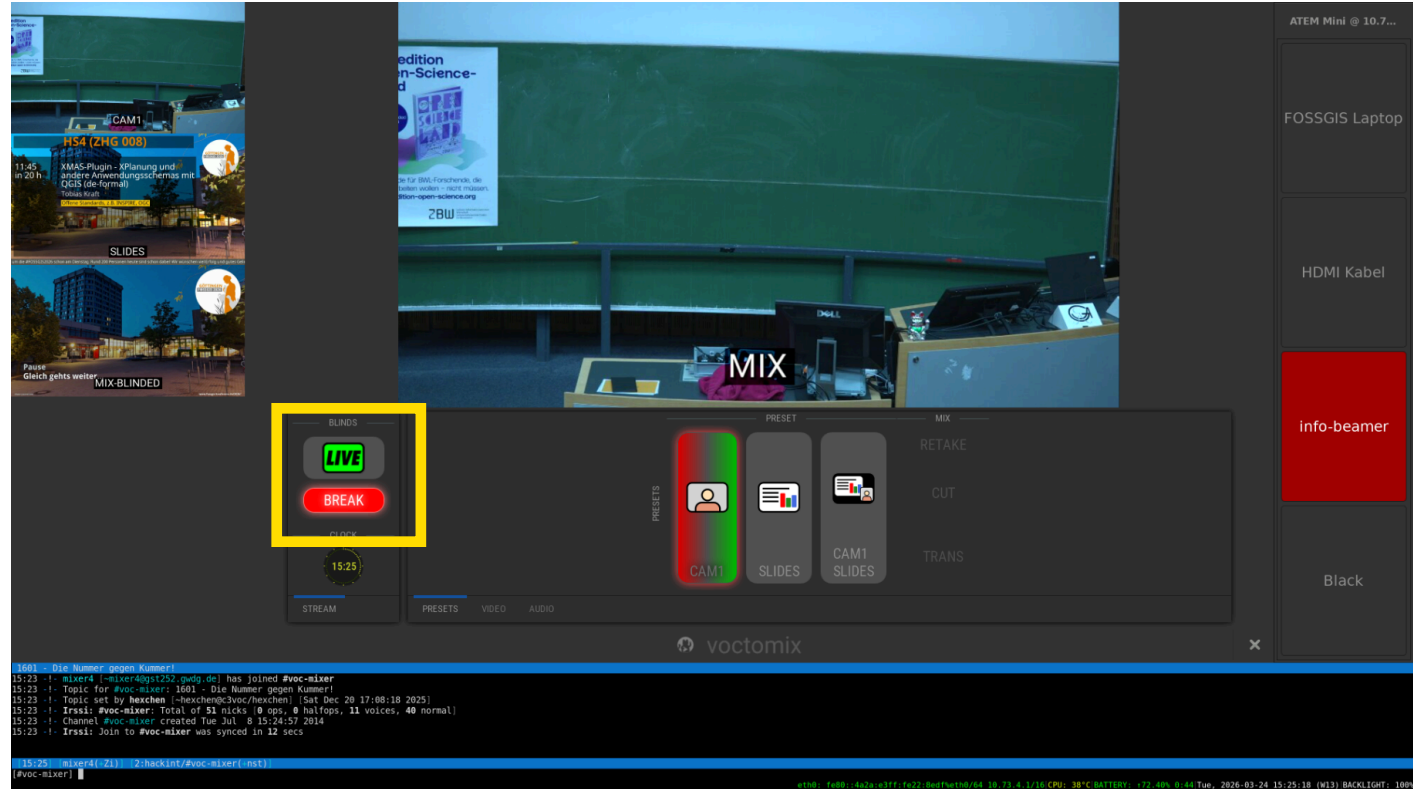

→ **switch to presentation when the talk starts:** cut away from infobeamer before the Herald starts with announcements, cut back after the last applause has finished

Mixing angel – more important than you might think

2. for remote audience:

start & stop the live stream

→ **bring the event spirit to the sofa:** leave room at the start and end of a talk, start streaming with the herald's opening announcements

Audio

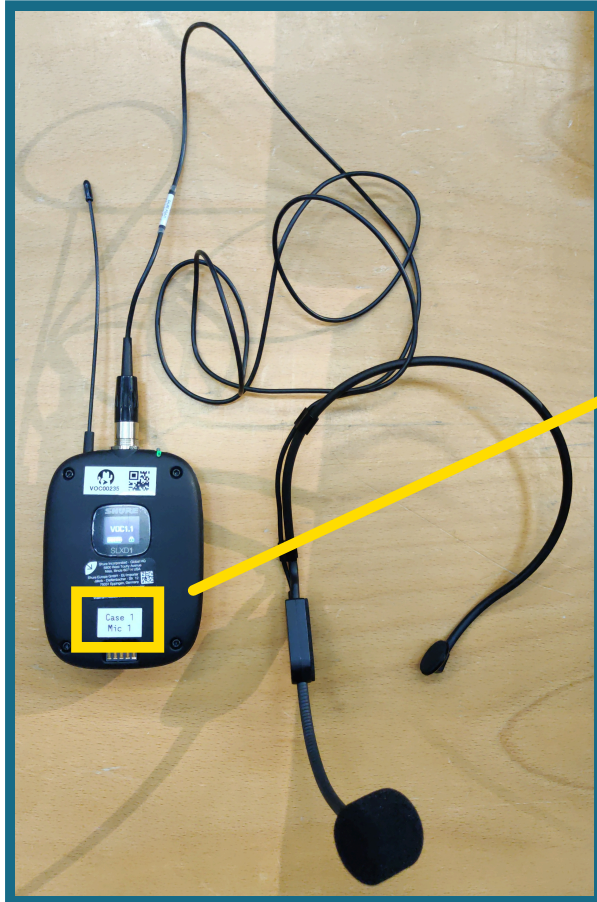

1. (un)mute speakers / laptop output (ask before talk if laptop sound is needed)
2. if necessary: adjust room loudness ("PA") and turn on or off music ("USB")

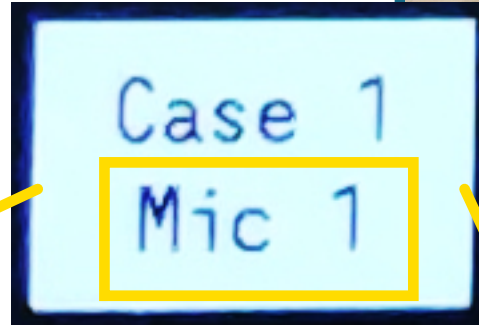

Microphones

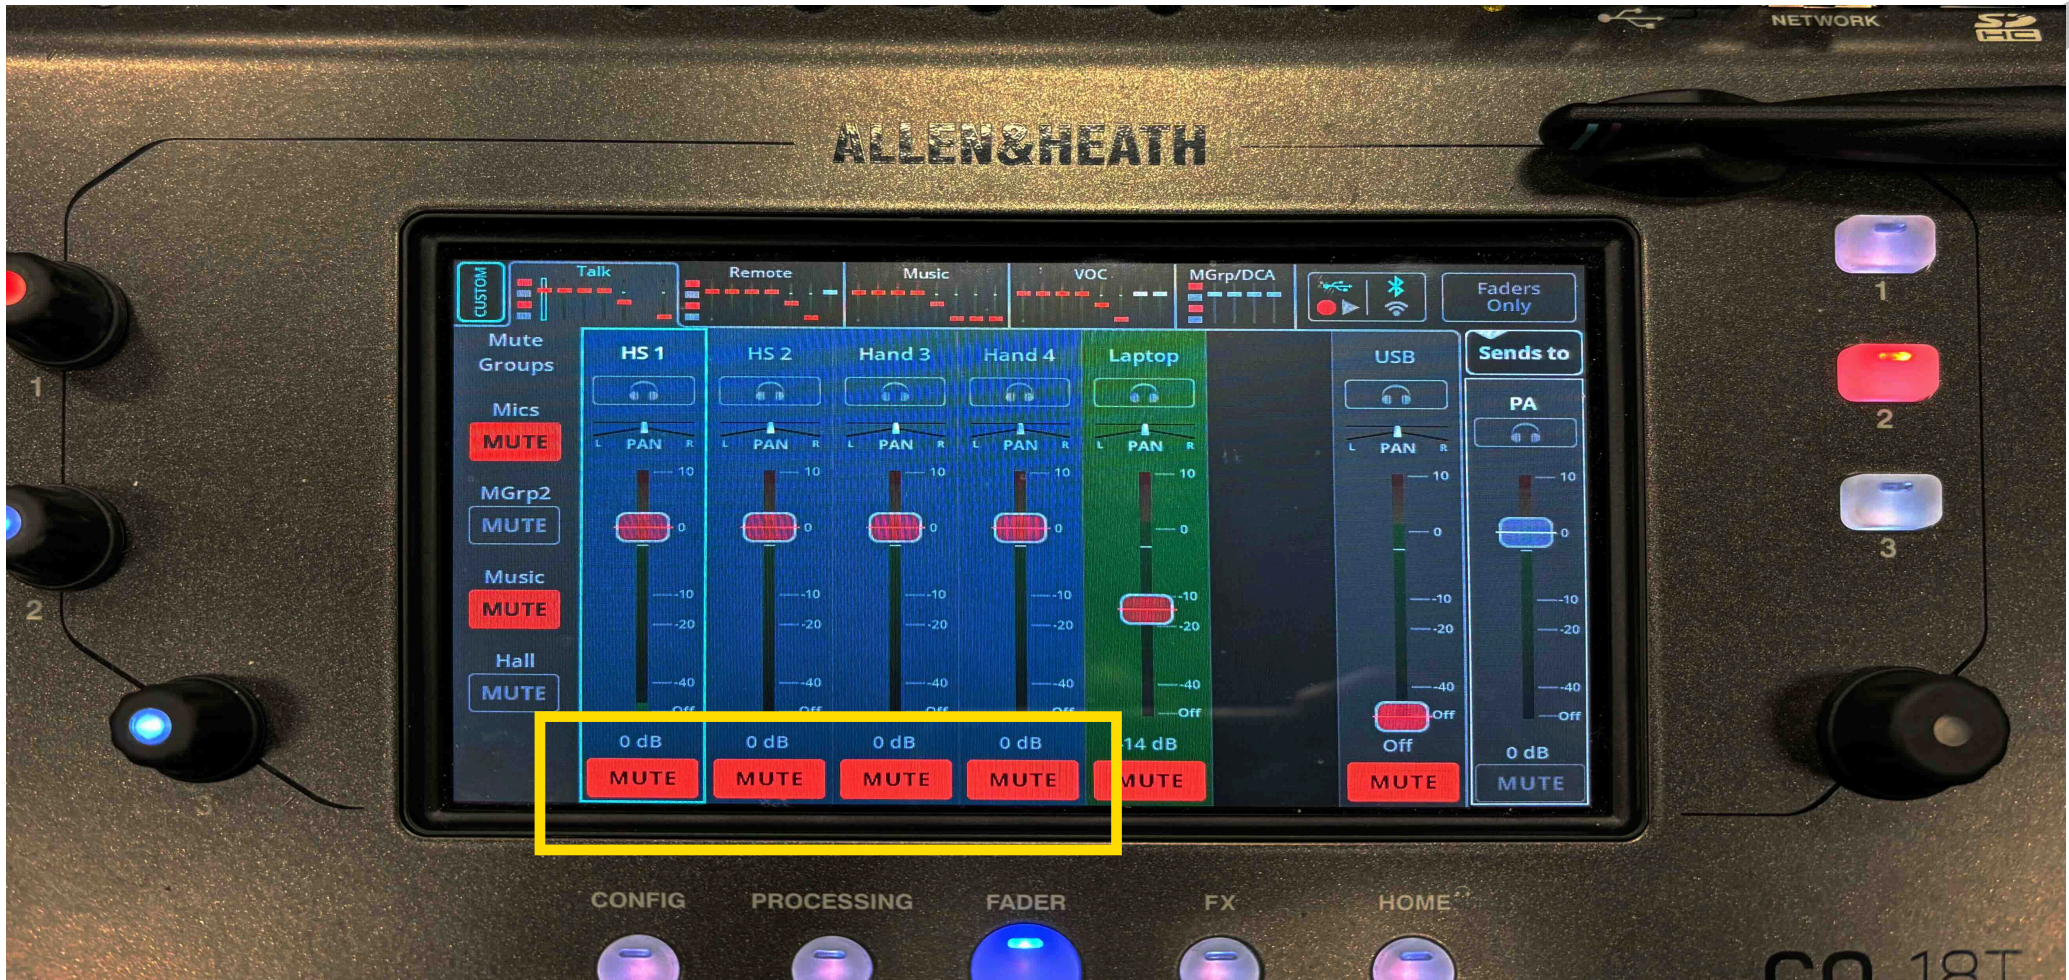

headset (best for speakers)

handmic (best for herald)

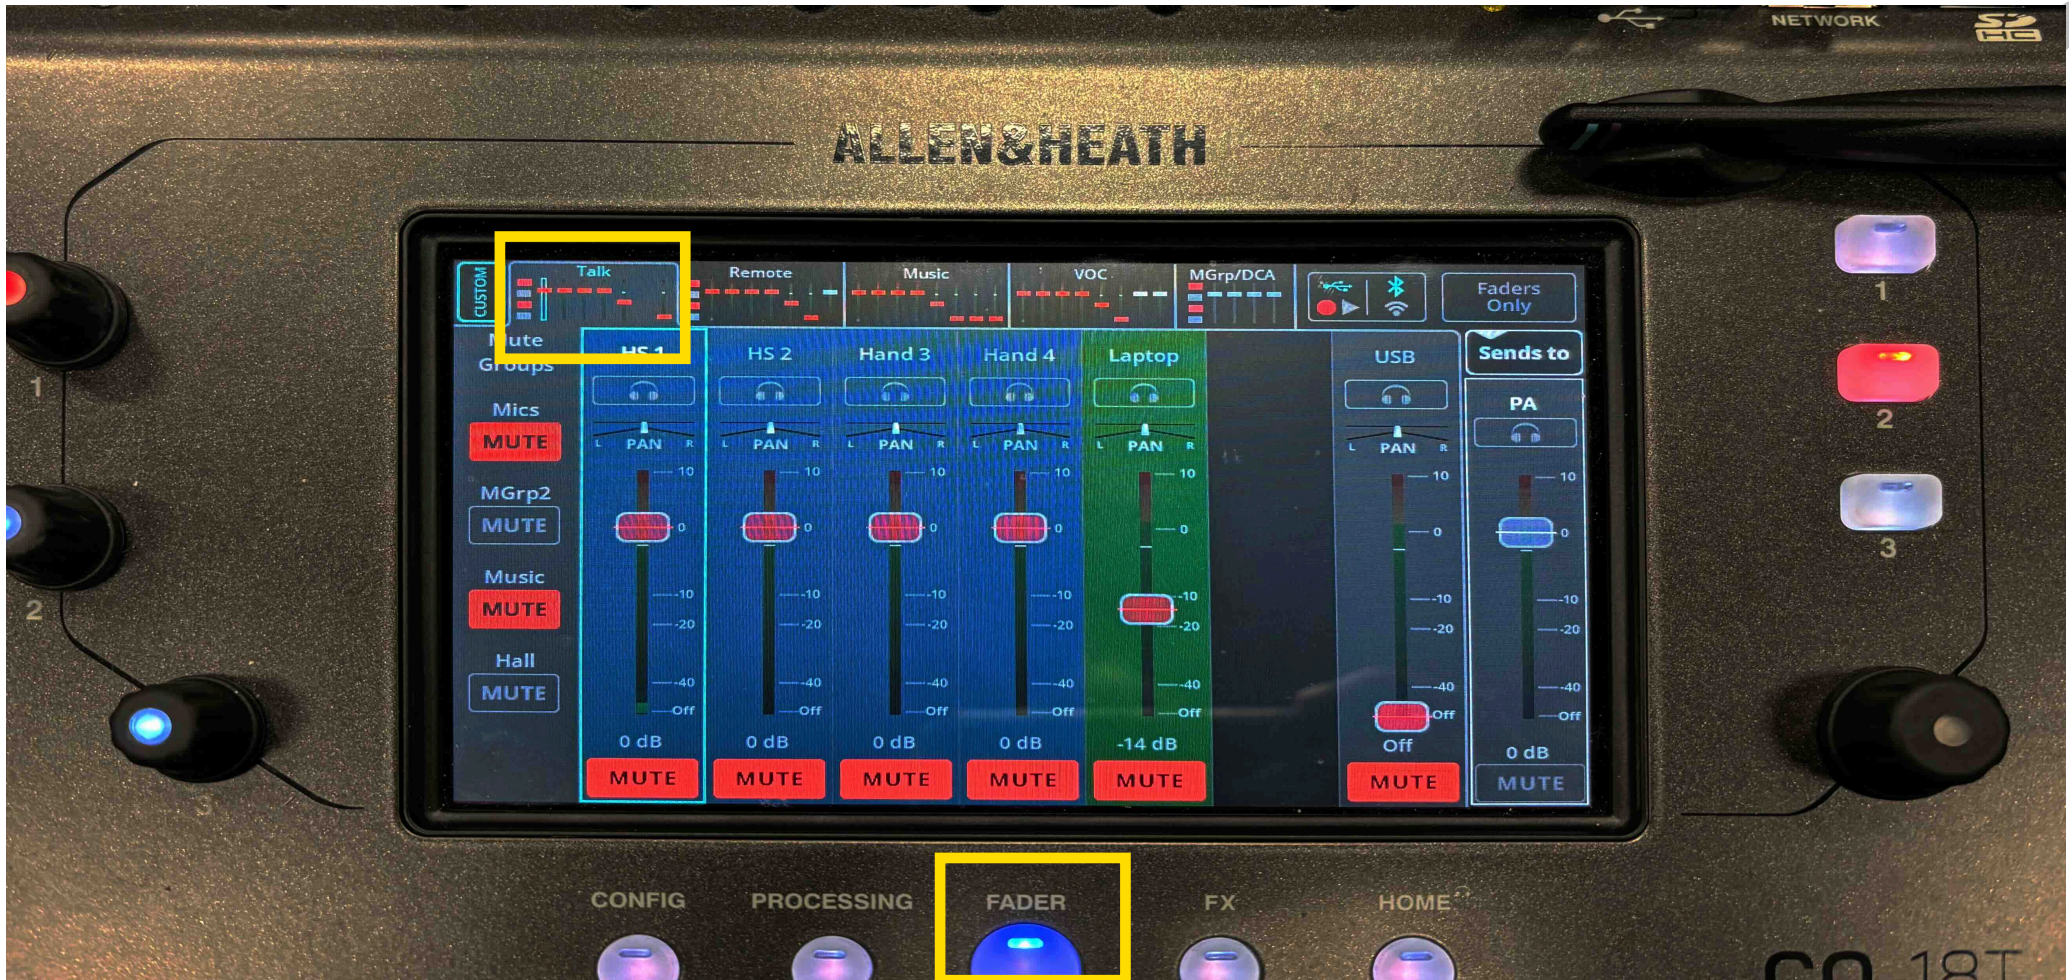

Mixer

Mics 1 + 2 are headsets (HS); Mics 3 + 4 are handheld mics (Hand)
Microphones that are unmuted are in the stream and recording!

Mixer

Lost? → These buttons will bring you back.

Usual talk timeline

0. PREPARATION

- Your shift starts (please be on time).
- Overlapping shifts allow time for handover.
- Get to know your fellow angels
- Get to know your equipment: check camera & mixer / Which mics?

1. MAIN PART

- Mixer: Put speaker's presentation on beamer & start live stream
- Talk starts with an introduction by the herald
- Speaker starts talk
- Q&A session
- Talk ends with "thank you" and applause
- Mixer: Stop live stream

2. HAND OVER

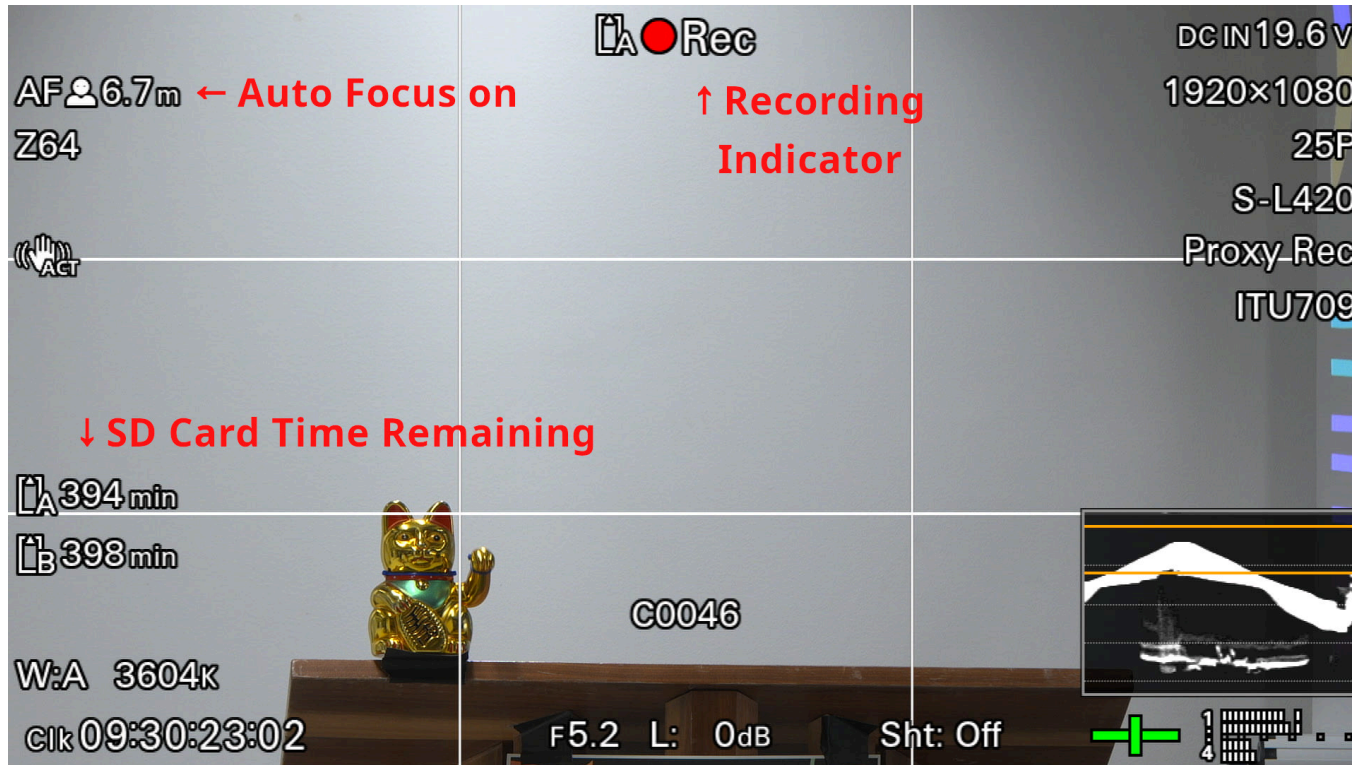

- Hand over to the next angels & leave a clean desk.

You're not alone:
Please use the checklists!

<https://github.com/voc/checklists/blob/main/source/talk.pdf>

Camera: Sony PXW-Z200

Check display

(usually no action needed!)

[Recording Indicator]

The recording must always run, even during the break.

[AF = Auto Focus on]

Use autofocus! → Focus peaking is shown in green on preview monitor.

[SD Card Time Remaining]

It must have enough remaining time before talk.

Camera: Sony PXW-Z200

Focus - control sharpness
(*Please use autofocus.*)

Zoom - vary the focal length

Iris - will have to be adjusted,
depending on light situation (*If
you change something, tell
other camera angels to change
it the same way in all cams.*)

Camera: Sony PXW-Z200

Zoom

- For smooth zoom use the zoom buttons.
- Gentle touch → slow zoom

Tripod: Sachtler ace

Who to Contact?

- Generic Questions? Something is wrong in lecture hall?
 - text us via the chat (mixer laptop, bottom)
- Do you want to talk to us? Visit our C3VOC Office
 - follow the winkekatze :)
